

Install / Uninstall Instructions

1) DCOM upgrade must be already installed (Windows 95 and 98 only)

If you are working with W95 or W98, DCOM upgrade must be already installed.
For other operating systems go to step 2.

You may know if this updated was done if this files:

ASYCFILT.DLL, COMCAT.DLL, OLEAUT32.DLL, OLEPRO32.DLL,
STDOLE2.TLB

Are present on the C:/Windows/System folder.

If its not installed then download the update from

www.microsoft.com/com/

2) OPC core components must be installed and registered.

If are not installed, expand the downloaded file and obtain the folder named
OpcCoreComp and place it in any directory you want but preferable on:

C:\Programm files\OpcCoreComp

In this folder execute the file "RegisterOpc.bat" for informing the windows registry
its location.

If you want to move this files or rename a folder (within the path) or delete this files,
then you must previously execute "UnRegistOpc.bat" file.

The latest realize for this files are in www.opcfoundation.org

3) Unzip ArianOpcV4

Place the unzipped folder ArianOpcV4 in its final location

e.g. C:\Programm files\ArianOpcV4

Now you are ready to run the executable file Arian_Opc_V4.exe

You may create a direct access to this file using your mouse right button.

If you want place the direct access in your c:\Windows\StartMenu.

Since no registry operation is done, you may uninstall the software just removing
the folder.
